Creating File Version Operation

To create File Version Operation in Network Inventory 5 perform the following steps:

1. Expand the **Operations** node.
2. Select **Scan for File** node.
3. Click **Add** Item button shown above Data tab.

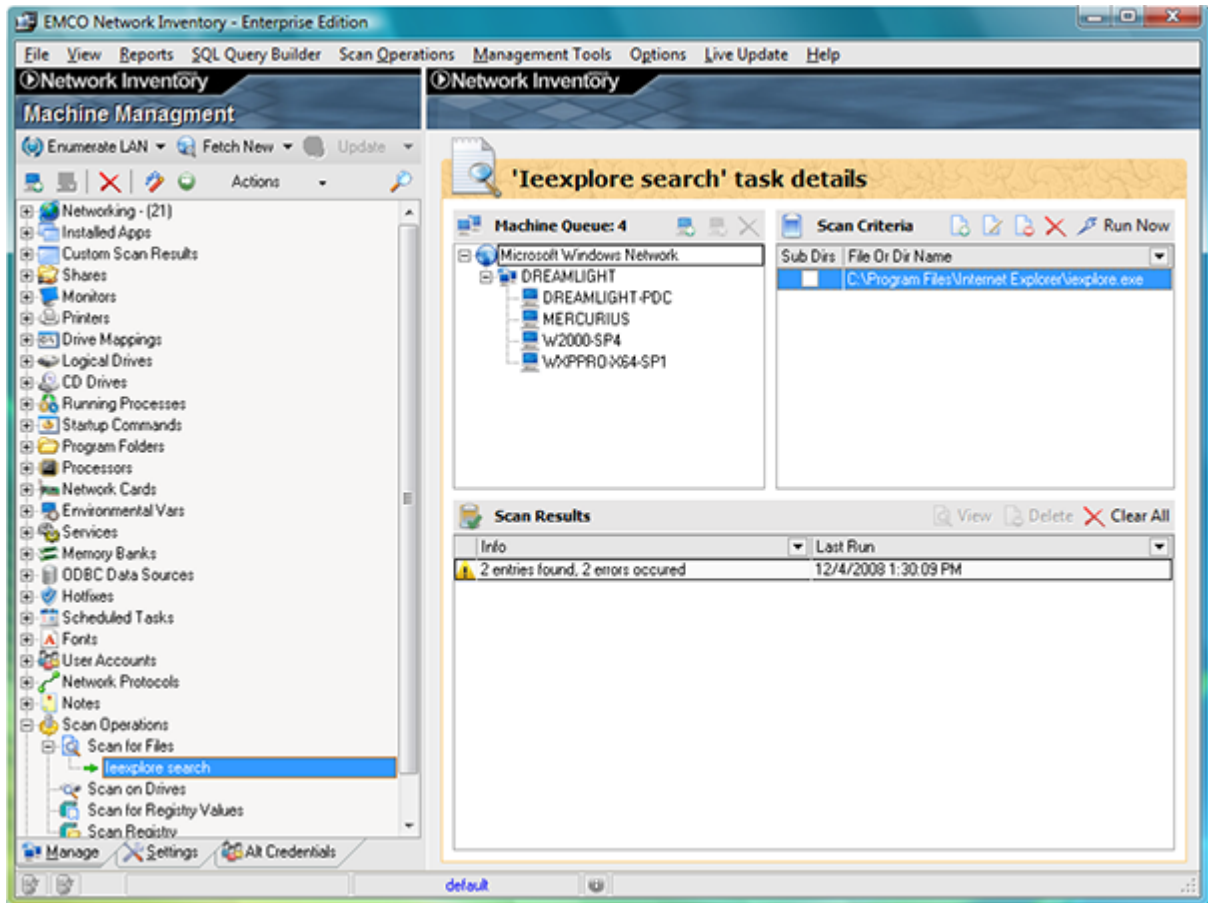

4. Operations JobDetails dialog appears on the screen.
5. Type your job name in the Job Name field.
6. Type the description of your job in the Description field.

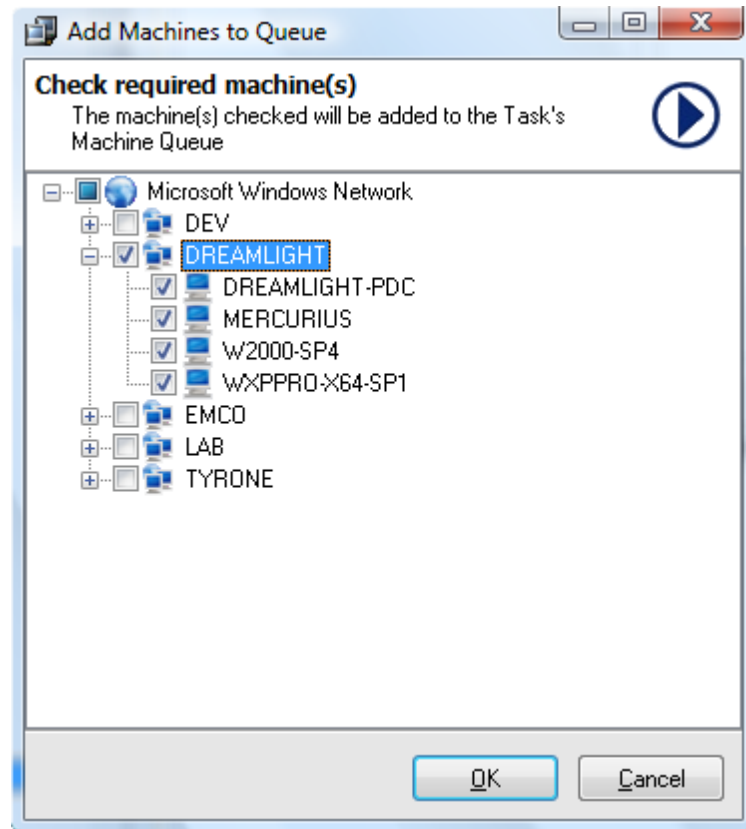

7. Click **Ok** button.

8. The added job appears in the jobs list.
9. Expand the File Version node.

10. Select the required job.
11. Click Add Machine button shown on the data tab.

12. Drag and drop machines dialog appears on the screen.

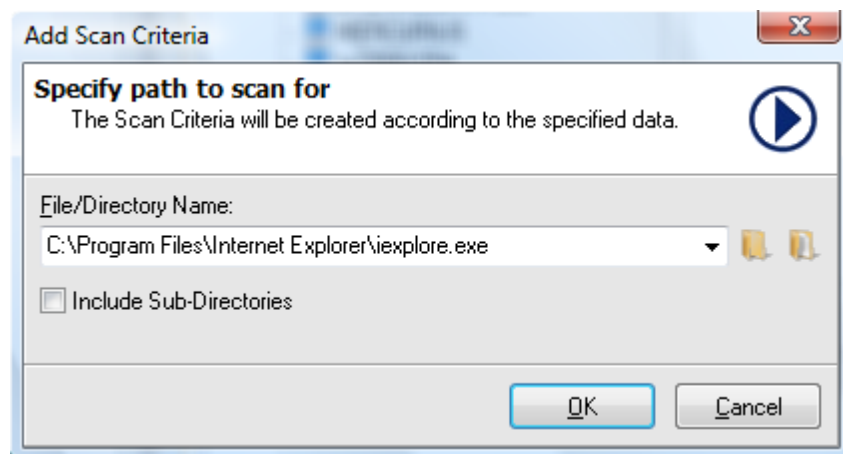

13. Press the Ctrl key and click the machines that you want to process from the machine tree.

14. Click any of the selected machines and drag it to machines list area.

15. The added machines appear in the machines list.

16. Type in the required file in the File/Directory Name field.

17. Click **Run Now** button.
18. Click the Last Run node shown under the selected job node.
19. Its details will appear in the Data Tab.
20. Expand the required machine node to see the details for the selected job.
