Filter Disconnected Machines

To filter disconnects machines in EMC0 Network Inventory 5 perform the following steps:

1. Expand the **Networking** node.

2. Now expand the required **Network** node.
3. Expand the domain/workgroup node.
4. This will display the machines on the selected Domain/Workgroup.
5. The machines with the red marks are the disconnected machines; this means that these machines have not been scanned for the data.
