Testimonials

A few clicks of the mouse and I have all the control I need

“ As IT Manager for EMCOR Service: Mesa Energy Systems, I maintain a Win2K environment with approximately 100 nodes distributed over 4 locations throughout California connected via a frame. I've experimented with many different remote desktop solutions. They required unreliable or tiresome remote clients to be installed before use. Some of them simply crammed too much functionality into the product resulting in software unnecessarily large, complex, as well as unstable. All of them were far too expensive to license.

I then discovered the EMCO Remote Desktop. The product was straightforward, and I was up and running without even reading a user manual. No remote client installs. No messy video drivers. Add or Identify remote workstations easily. Just a username, a password, and a few clicks of the mouse and I have all the control I need. The price is amazingly affordable. It works, and it works well . . . And I'm only on version 1.0! I look forward to investigating the other EMCO products.

A great value for your money

“ Administering networks is something all system administrators do on a daily basis. Unfortunately, minor issues and major problems tend to happen from time to time and in most cases require immediate and resolute actions, as any network downtimes affect the whole company and its clients. However, sometimes problems come when they are least expected - for instance, when the system administrator is away or on a sick leave and no substitute is available. If you are a system administrator looking for a versatile remote administration tool, EMCO Remote Desktop Professional is just what the doctor ordered!

This compact, affordable and multifunctional utility from EMCO Software provides the essential toolkit that allows system administrators to manage wired and wireless Microsoft networks remotely in an efficient and expedient manner. This approach also allows you to troubleshoot network problems from a centralized location, which is time and money-consuming. Remote Desktop Professional collects various network data about hardware and software installed on network computers and tasks currently running on them. The advanced built-in remote task manager is very similar to that found in NT-based systems, so you won't have any problems getting used to it. The tool supports Windows Vista and does not require DCOM/RPC to operate.

If in doubts about choosing the right software for remote network administration, look no further than Remote Desktop Professional. A great value for your money, it offers everything necessary for resolving network problems in a wink of an eye!

Advantages and Benefits

Following is a list of top advantages and unique features that distinguish the product among others on the market. Take a look how you can use product features in your day-to-day work and what benefits you can get from it.

Work With the Remote PC as With Your Own Local Machine

EMCO Remote Desktop gives you a freedom to work remotely with any remote PC. When you connect to the remote desktop you can see its screen at the real time and all your mouse movements and key presses are transmitted to the remote PC in order to manage it by exactly the same way like you do it with your personal PC. Thus you don't need more to physically visit each PC in order to work with it. All administration, configuration, support, troubleshooting, education and other kind of day-to-day tasks can be performed remotely.

Share Access to Remote PCs with Other Users

Standard Windows remote desktop connection tools allow having only one active session per PC. Using such connection you can't establish connection with remote PC if it's used by logged-on user. EMCO Remote Desktop was designed to remove such limitation and can establish multiple active connections with remote PC. It is very helpful for presentations, troubleshooting and remote education, because the same desktop view is visible for multiple people at once, including a user logged-on on remote PCs. One participant can take a control on PC and manipulates with mouse and keyboard, while other watch the process in a view mode.

Save Costs to Adopt Remote Access Software

Wide set of features and reasonable price makes EMCO Remote Desktop one of the bestsellers on the market. Depending on the selected edition and number of managed nodes (remote PCs), the price for node varies from less than \$1 up to \$7. Compare EMCO Remote Desktop with other remote access tools that have significantly less features set, but the higher price that varies from \$25 up to \$50 per node.

Use Fast, Flexible and Secure Solution

EMCO Remote Desktop has plenty of settings to make your work comfortable, including full-screen mode support. In this mode a remote screen in original resolution occupies all space on your screen to fully emulate a usage of the local desktop. Optimized and encrypted data transfer algorithms guarantee high speed of work with tens screen updates per second, so remote desktop is very responsive and you can even forget that you work remotely.

Communicate With Remote Users

Very often you need to communicate with the user sitting in front of the remote PC. For example, you provide a remote support and need to ask some questions or do something with remote PC and need to pay remote users' attention to some aspects. Using EMCO Remote Desktop you can start chat session with remote user to exchange instant messages in real time in parallel with managing of remote PC.

Capture Remote Screens and Record Remote Screencasts

Using EMCO Remote Desktop you can connect to one or multiple remote PCs to see remote users activity. Connection is silent, it means that remote users don't have any notifications about the remote connection and can't easily detect the fact that their desktops are monitored. It allows using EMCO Remote Desktop not only as remote management, but also as remote monitoring tool. Application is equipped by useful features that can help you with the monitoring of remote PCs. You can capture a remote desktop screen and save it as an image file or you can record remote activity as an AVI file.

Get Detailed Inventory Reports

Only EMCO Remote Desktop provides an ability to scan all computers in your local network and get detailed hardware and software inventory reports. Inventory module works in automatic mode and collects hundreds parameters about all your hardware and software assets, including serial numbers, models, settings, etc. All collected information can be reviewed in application or prepared for printing as the customizable reports.
